

Rapid Reaction To Emerging Cyber Threats With The watchTower Platform

Cybercriminals are exploiting emerging vulnerabilities and threats at increasingly rapid speed - in some cases, with in-the-wild exploitation occurring in as little as 4 hours. The watchTower Platform can determine exposure to emerging vulnerabilities and threats within 2 hours, enabling security teams to respond and prevent breaches before they occur.

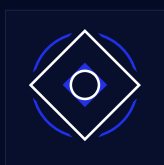

This is the new reality that we exist in, where attackers, ransomware gangs and APT groups are incentivised to compromise networks as quickly as possible. The watchTower Platform has been built to combat this threat with speed - enabled by continuously monitoring an organization's attack surface and leveraging the expertise of the watchTower Labs research team.

Traditional tools and periodic vulnerability scans have been proven to be ineffective in this new reality, while delayed emerging threat responses increase the likelihood of breaches, exposing organizations to severe financial and reputational damage.

Rapid reaction, enabled by the watchTower Platform

- **Unmatched Speed Through Industry-Leading Expertise**
The watchTower Labs team's continuous research enables watchTower clients to **understand their exposure to emerging threats within 2 hours on average, outpacing the average 4-hour exploitation window.**
- **Precision Through Comprehensive Visibility**
Comprehensive and continuous attack surface mapping highlights and records in-use technology, **enabling precise targeting of vulnerabilities during rapid responses.**
- **Actionable Intelligence and Prioritization**
Real-world security testing, combined with actionable threat intelligence prioritizes critical and emerging risks for efficient and effective responses.

Key Solution Benefits

Prevent Breaches Before They Happen

Rapid identification ensures organizations stay ahead of attackers, enabling remediation before in-the-wild exploitation begins.

Assurance When Unaffected

Gain assurance with independent confirmation from watchTower when your organization is not exposed to an emerging threat, enabling confident reporting to boards and cyber insurers.

Resilience Against Evolving Threats

The watchTower Platform enables continuous monitoring and adaptability to new vulnerabilities, ensuring sustained protection against a dynamic threat landscape.

Accelerated and Efficient Operations

Streamline workflows by automating threat prioritization and validation, reducing manual effort while maintaining rapid response capabilities.
